Who We Are

A leading provider of
Software Deployment
and Custom Software
Development.

What We Do

Solve organization's need
for highly sophisticated
solutions for all their
software deployment
and development

How We Do It

We offer a globally
distributed development
network, with
an integrated suite of
custom installation and
development
solutions at a competitive
price.

A Proud History

digiploy's™ founders have been successfully pioneering cost effective software solutions for over 14 years. At the center of **digiploy™** is its vast knowledge and expertise in software deployment and development. Our clients consist of companies within all industries, from Fortune 100 corporations to small businesses (one to 10 employees business). We find it necessary to maintain an entrepreneurial culture to ensure that we evolve with the current trends to meet all of your software deployment and development needs.

Leading an Industry

At **digiploy™**, we strive to lead in the software installation and software development industry, including custom software development, build engineering, deploying applications, and application updates and patches. Our globally distributed development network translates into true business value and cost savings for our customers.

Anticipate, Define, Solve

We work in an energetic, highly motivated environment that enables us to help our clients anticipate, define, and solve the development issues that are critical to their success. Our dynamic global organization functions as a single group by bringing our U.S. and offshore operations under one cohesive umbrella. **digiploy™** has the expertise, experience, and infrastructure to execute both large- and small time-critical software projects with high quality and total reliability.

The world is changing

Traditional ways of doing business are no longer sufficient. Today, more than ever, companies act with the best possible knowledge of every option and confidently move forward to effectively compete. At **digiploy™**, we provide our customers with a break-down of options and advantages that we can offer for outsourcing part or all of their software deployment and/or development needs.

Building strong ties

digiploy™ is an international community of highly intelligent and motivated individuals; each dedicated to building long lasting relationships with every client.

digiploy™
SOFTWARE

DIGIPLY

digiploy combines US and offshore development facilities to provide a rich suite of Software Deployment and Custom Software Development Services.

Custom Software Development, Re-Engineering, & Support Services

Custom Software Services from digiploy are built on the foundation of quality and reliability at affordable prices. The use of the international development facilities keeps costs down; providing clients providing clients the benefit of lower prices with years of experience and know-how.

The most important aspect of these services is the level of customization and the reliability of delivery that is built into the every project, no matter the size. Our Custom Software Development offerings include:

[Software Development](#)

How digiploy can help your Organization

Return on Investment

The key objective of any information technology project is to realize a return on your investment in time, resources, and capital. Because the costs of most projects can be considerable, our ultimate goal is to provide you with a means of obtaining a considerable return by outsourcing part or all of your software development and deployment projects. We accomplish this by offering a solid infrastructure, systems and procedures that guarantee quality, and a proven delivery method--all at competitive prices.

Globally Distributed

digiploy™ offers a globally distributed development network that services large and small companies around the world. Our US headquarters and offshore development facilities are equipped with the state-of-the-art hardware, the latest software, and an infrastructure that supports over 350 technology professionals to ensure we meet all of your technical and human resource needs.

Quality Systems

Our Quality Systems are designed to derive maximum reliability from our development processes, and provide maximum visibility on the project progress to the clients. Reliability and Visibility are cornerstones for the success of outsourced offshore development.

Delivery Approach

Any outsourced software project has a significant amount of work that does not require direct involvement or face-time with the client. Such activities (coding, unit testing, documentation, etc.) can be very effectively carried out in cost-effective and high-quality offshore delivery centers. Our approach is built around balancing onsite and offsite teams to reduce cost, speed development cycles, and ensure the entire project is handled in a professional manner.
